EXPERIENCE

COMMERCEIQ | SOFTWARE DEVELOPMENT ENGINEER

Bangalore, India | Dec 2022 – Present

Full-Stack Development

- Designed and built a unified authentication system using React, Nodejs, and WorkOS creating a scalable, plug-and-play login infrastructure that streamlines user access across multiple products
- Migrated over 30+ dashboards from ElasticSearch to BigQuery, improving dashboard load speed from over 1 minute to under 10 seconds. Utilized a tech stack of React, Node.js, and TypeScript.
- Developed advanced analytical dashboards with insightful visualizations for customers, leading to a 25% increase in user engagement.
- Modernized the tech stack by migrating a legacy class-based React codebase to React 18 and upgrading the backend from Node.js 12 to the latest ES6 TypeScript, enhancing code maintainability and performance.
- Developed self-service tools for configuration management, enabling asynchronous bulk updates, role-based access control, and robust error handling. Delivered this project two weeks ahead of schedule.

Data Engineering & Optimization

- Led a team of five to migrate a critical GCP storage bucket from a multi-location to a single-location configuration, reducing costs by over \$13,000 per month while maintaining performance.
- Optimized SQL queries by leveraging advanced techniques, resulting in an average speed improvement of 2x and reducing resource consumption by 15%. Some queries saw improvements of over 4x.
- Worked extensively with BigQuery and DBT to transform several terabytes of raw data into rich, usable formats, enhancing performance for use across multiple teams.

Cloud & Infrastructure

- Migrated several services, including primary frontend and backend CI pipelines, from Jenkins to GitHub Actions. This reduced deployment time from 40 minutes to less than 5 minutes, improving developer efficiency through best practices like caching, resource sharing across steps, and job parallelization.
- Designed and built a scalable, reliable infrastructure for asynchronous report exports using Cloud Tasks, Cloud Run, and Terraform. This system included automated email notifications upon job completion.
- Designed and implemented infrastructure and code for monitoring data reliability, automating the creation of Jira tickets for anomalies exceeding defined thresholds. This reduced data discrepancies and enabled earlier issue identification.

Collaboration & Knowledge Sharing

- Awarded recognition and praise from the team for being a top contributor while maintaining exceptional standards of documentation, code quality, and test coverage.
- Mentored and onboarded four new team members, provided support with complex SQL queries and debugging, and fostered a collaborative work environment.

CASA RETAIL AI | PRODUCT ENGINEER (SDE)

Chennai, India | May 2022 – Dec 2022

- Migrated a portion of the database from ElasticSearch to ClickHouse.
- Developed a query builder to dynamically construct SQL queries based on user-defined conditions from the UI.
- Designed optimal data structures for storing OLAP data in ClickHouse.
- Efficiently addressed the challenges of OLAP updates and deletions.
- Reduced query execution time from over 1 minute to under 4 seconds.

- Processed large-scale real-time raw data from Kafka streams. Developed a service to listen to the stream, perform necessary data transformations, and write the results to the database.

FREELANCE PROJECTS | SOFTWARE DEVELOPER

Tamil Nadu, India | Aug 2020 – Jan 2022

- **ARIMA LABS (Aug 2021 – Dec 2021):** Developed a traffic visualization dashboard using React and TypeScript, with a Django backend and MySQL database. Redesigned database schema, implemented pagination, and optimized queries, improving speed by 10x. Built Node.js infrastructure for image storage and RTSP-to-HTTP video stream conversion, reducing RAM usage by 50%.
- **HOODS (Oct 2021 – Jan 2022):** Created a social media app in Flutter with Firebase for local communities. Implemented Firebase Cloud Messaging, Cloud Functions, and Realtime DB integration with Firestore to track user activity. Used ObjectBox caching to reduce bandwidth by 30% and employed GetX for state management.
- **AMMAMMA'S (Aug 2020 – Nov 2020):** Designed, built and launched an E-Commerce app using Flutter and Firebase, featuring user reviews, online payments (via Stripe), and an admin panel for order management. Built a separate delivery tracking app and released the main app on the Play Store, achieving 1,000+ downloads and a 4.6-star rating.

OTHER PROJECTS

ALGORITHMS VISUALIZER [↗](#)

REACT, DSA

A visualizer built with ReactJs to visualize various Path finding and Sorting algorithms. Like Dijkstra's algorithm, A* algorithm, Merge Sort, Quick Sort, Heap Sort, etc.

SPOTIFY LYRICS FINDER [↗](#)

FLUTTER, FIREBASE, SPOTIFY API, GENIUS API, AUTHENTICATION, CACHING

A mobile application built using Flutter to get the lyrics of the song you are currently listening to on Spotify. I've used Spotify OAuth to connect to the Spotify account. The lyrics are fetched from Genius API.

FLAPPY BIRD [↗](#)

P5JS, CSS, HTML

A simple Flappy bird game built using HTML and p5js.

EDUCATION

BE. Computer Science Engineering

9.36 CGPA | Erode, TN, India

KONGU ENGINEERING COLLEGE

SKILLS

Languages: Javascript, Typescript, Python, Golang, Java, SQL, Ruby

Frameworks: Flutter, React, Nodejs, NextJs, ExpressJs, Django, Ruby on Rails, ElectronJs

Databases: Postgresql, BigQuery, Firestore, MongoDB, Clickhouse

Tools & Platforms: Looker, DBT, Spark, Terraform, GitHub Actions, Jenkins

Cloud: GCP (Cloud Run, CloudTasks, Kubernetes), AWS (EC2, S3)

Other: Firebase, Git, Kafka, CI/CD, Docker, SQL optimization, Agile
